Section 1: Functional testing

a) Kamil results:

References:
$JBOSS_HOME - jboss home directory
$GIT - [github repository](#)

1. Stored jboss server boot logs without any apps deployed - no petstore neither G9.

- started jboss:
`$JBOSS_HOME/bin/run.sh`
- searched server logs for any exceptions:
`grep -ir exception $JBOSS_HOME/server/default/logs/* > grep_exception.lo`
- packed logs and copied to the repository:
`tar cvzf jboss_clean_boot_logs.tar.gz $JBOSS_HOME/server/default/logs/* ; m jboss_clean_boot_logs.tar.gz $GIT/1_functional_tests/kam`

2. Deployed G9 and stored boot logs from jboss.

- deployed G9.ear by copying to $JBOSS_HOME/server/default/deploy/
- searched server logs for any exceptions:
`grep -ir exception $JBOSS_HOME/server/default/logs/* > grep_exception_G9.lo`
- packed logs and copied to the repository:
`tar cvzf jboss_boot_G9_logs.tar.gz $JBOSS_HOME/server/default/logs/* ; m jboss_boot_G9_logs.tar.gz $GIT/1_functional_tests/kam`

3. Analysed logs looking for exceptions: thrown by clean jboss instance startup and thrown by G9 app startup.

b) Tanveer results:
